

JustHealth- Iteration Number 8

Iteration Start Date:	2.2.15
-----------------------	--------

Iteration Finish Date:	16.2.15
------------------------	---------

Outline of what we want to achieve:

- Reminder functionality for both android and web to remind patients to take medication, when appointments are and when a user needs to change their password.
- A notification system on both android and web so users are able to see requests or reminders.
- A way to store the past notifications for a user to view
- Different color notifications based on how important they are
- Initial progress on the admin portal

What we Achieved:

- During this iteration we met all the above aims. We created a push notification system on android and notifications and reminders on the web.
- Progress on the admin portal was made

What we have learnt:

- Push notifications, Google cloud services
- Signaling (Handling system events)

What we would do differently:

- Split up the code better by putting it into different modules.
