

JustHealth- Iteration Number 5

Iteration Start Date: 24.11.14

Iteration Finish Date: 9.12.14

Outline of what we want to achieve:

- To have a fully functioning way for carers to add medication details for patients.
- A secure and safe way to add medication details for patients to avoid human error
- For carers and patients to be able to add appointment details.
- The Android app to be integrated with the phones Google calendar.
- **Reminder functionality for both android and web to remind patients to take medication and when appointments are.**
- **A notification system on both android and web so users are able to see requests or reminders.**

What we Achieved:

- Add medication, Add prescription, web and android
- Add appointment, google maps, appointment reminders on app, view upcoming appointments, view old appointments, invitee carer can book appointment with a patient.
- Post requests- refactored. There is now a framework to pass requests to the API.
- Feedback class for toasts

What we have learnt:

- We have learnt a lot about feedback and navigation on the app (app structure)
- Overestimated the amount of work we could achieve as we did not factor in other deadlines
- How to interact with other application in android (calendar)
- How to embed google maps
- Considered design more with the app

What we would do differently:

- Set realistic targets
- Plan for other module deadlines
- Collectively think about design and refer to the design documents more throughout the iteration.
